

# Cloud Networks home page copy

By Glenn

## Work your way

No more I.T. constraints

Work anywhere, on any device.

All your normal programs, all your normal files, all backed up & secure. But none of your normal headaches.

And no crazy price tag.

First, we learn how you work

What do you do?

Who's in your team?

How do you work together?

What does your system look like?

How is it causing you grief?

What programs do you use?

How much data do you store?

The we put your entire system in the cloud

All your programs, all your files. Everything. (Or just a few things, if you prefer. It's completely up to you.) All on our secure servers.

Microsoft Office, Outlook, Exchange Server, MYOB, whatever... If we don't already have a licence, we buy it. We can even help you improve your system if you want us to. We have years of IT experience and we know all the latest and greatest technologies.

## And your log in and work exactly how you normally do

A week after you give us the go-ahead, we'll send everyone on your team a username and password for [cloudnetworks.com.au/login](https://cloudnetworks.com.au/login). When they log in, they'll see all their normal programs, systems and data, just like on their own computer now. They can just get to work.

## Wherever you are, on any device

You'll no longer be shackled to your desk at work. Work anywhere with an internet connection, on absolutely any device too. Laptop, iPhone, iPad, Android phone or tablet, Windows phone, Chromebook...

## It's fast, secure & safely backed up

If you're on a broadband connection, you probably won't notice any real difference in speed. (Ask for a free trial to see for yourself.) We'll back up your data every 3 hours, and mirror your backups to our second Australian data centre in a different geographical location.

## We maintain it all & support you with gusto

If it breaks, we fix it. If it needs a new server, we buy it. If it needs an update, we install it. If you have a problem, we solve it. If we see a way for you to work smarter, we suggest it. And you don't pay a single extra cent. It's all part of your flat monthly fee.

## All for a flat monthly fee, with no lock-in contract

You pay a flat fee per user. No hidden costs. Your investment depends on your system - what programs you use and how much data you have.

## Tech-support for anything else too

We can provide tech-support for anything - not just your Cloud Networks system. On-site computer fixes, new PCs, domain name registration, new software licences, general IT research, SSL certificates... Whatever you need help with, just give us a call, and we'll take care of it. Obviously that's not included in your flat monthly fee, but we'll quote before we do anything, and it'll be reasonable. Just as importantly, you'll never need to call anyone else for tech support again!

Call <phone number>  
for a quote and a FREE trial.
